15th Annual Comprehensive Surgery Course for Novice and Experienced Implant Surgeons

Presented by
Dr. Anthony G. Sclar
Author of: Soft Tissue and Esthetic Considerations in Implant Therapy

February 1-5, 2013
Miami Beach, Florida

Conference Testimonial

“ISM is an excellent balance of scientific and clinical practice. Evidence based practice protocols presented in a passionate informative and entertaining way. Concepts were reinforced superbly with the blend of didactic, video presentation and workshops.”

Dr. Brian Whitley, OMS
Hamilton, New Zealand

Our flexible 3, 4, or 5-day program options allow you to customize your learning experience according to your educational needs and level of experience while providing the opportunity to enjoy the world renowned destination, South Beach.

1. Comprehensive 5-day 31.5-CE hour program with extensive video surgery, formal question and answer periods and elaborately detailed course workbooks
2. HANDS-ON Soft and Hard Tissue Grafting Workshops (Optional)
3. Implant Prosthetics Workshop (Optional)
4. Case Presentation and Marketing Workshop (Optional)
5. Regenerative Techniques and Technologies Forum (Optional)
Designed for novice and experienced surgeons alike, ISTM 2013 is a comprehensive implant surgery course that provides participants with an extraordinary opportunity to be exposed to: **fundamental sciences**, **emerging implant technologies**, **indispensable patient evaluation**, **risk assessment**, **treatment planning and case selection information**, **techniques for management of soft and hard tissues during implant surgery**, **oral soft tissue grafting and perio-plastic surgery procedures to enhance periimplant and periodontal soft tissue stability and esthetics**, **practical and predictable hard tissue ridge augmentation techniques to allow implant placement at deficient sites**, a **systematic approach for evaluation of esthetic patients**, evidence based and biologically acceptable esthetic implant treatment protocols for achieving and maintaining long-term esthetic results, **interdisciplinary management of single, multi-tooth and full arch complex esthetic dental implant reconstructions**, **vital evidence based clinical information required to avoid and manage general, esthetic and intra-operative surgical implant complications**, and a **wealth of practical tips and clinical pearls from one of the most experienced implant surgeons and recognized educators in the world**!

Our 5-day, 31.5-CE hour didactic program features extensive video surgery presentations and formal question and answer periods providing an interactive forum for step-by-step learning of essential and advanced implant surgery techniques. Case based learning methodology used in each topic specific program ensures that participants will be able to immediately assimilate didactic and clinical information into their practices. While each program builds on the information presented on the previous days, flexible program options allow you to customize your learning experience according to your level of experience and educational needs.

Optional workshops offer hands-on surgical skills training, prosthetic training for surgeons, vital case presentation and marketing information. Our **Regenerative Techniques and Technologies Forum and Digital Dentistry Workshops** provide cutting edge information making yesterday’s impossibilities the commonplace realities of today’s successful dental implant surgery practice. Although an elaborately detailed course workbook provides an invaluable future reference source, participants will gain maximum benefit from reading Dr. Sclar’s textbook: *Soft Tissue and Esthetic Considerations in Implant Therapy* (Quintessence 2003) prior to the course.

"Essential Course for surgeons looking to provide excellent care to their patients: Biological and evidence based treatment protocols allow for predictable outstanding esthetic results. If you want to offer your patients the best in implant dentistry you should take this course."

Bradford S. Jungles (Northfield, NJ)

"The Artistry of your soft tissue work is inspiring to all clinicians."

Periodontist Dr. Raj Patel

"Very Good! I always like more clinical pictures; particularly complications to learn from."

Dr. Russell Bleiler, Oral Surgeon (Langhorne, PA)

"Great course. It will change my practice immediately."

Dr. John Spann (Chattanooga, TN)
Conference Synopsis

**DAY 1**

**Essentials of Dental Implant Surgery**
This program provides the practical information required to develop a thriving dental implant surgery practice. Emphasis will be placed on: patient evaluation, risk assessment, conventional and digital diagnostics and prosthetic driven treatment planning, case selection, implant occlusion and biomechanics, surgical instrumentation, protocols for management of hard and soft tissues during implant surgery including guided surgery.

*(Regenerative Technologies Forum available)*

**DAY 2**

**Soft Tissue Grafting - Periodontal Plastic Surgery - Soft Tissue Implant Site Development**
This program is designed for doctors who desire to expand their practices by learning “How, When and Where” to perform contemporary oral soft tissue grafting and periodontal plastic surgery around dental implants and natural dentition including: Gingival grafts, Subepithelial connective tissue and Combination onlay-interpositional grafts, use of soft tissue graft substitutes, VIP-CT palatal pedicle flap for 3D soft tissue implant and pontic site development, root coverage, crown lengthening and papillae augmentation procedures.

*(Optional hands-on workshop available)*

**DAY 3**

**Intra-Oral Bone Grafting and Hard Tissue Implant Site Development**
This program is designed for doctors who desire to increase their indications for placement of dental implants at anatomically compromised sites by learning the principles, procedure details, material science, and indications for performing guided bone regeneration, block bone grafting, lateral window and crestal approaches for sinus lift bone grafting as well as bone expansion and ridge splitting procedures for horizontal and vertical hard tissue augmentation at implant sites.

*(Optional hands-on workshop available)*

**DAY 4**

**Demystifying Esthetic Implant Therapy**
This program is for doctors who desire to achieve predictable outcomes when placing implants in areas of high esthetic concern. The importance of patient evaluation, risk assessment, conventional and digital treatment planning protocols as well as proper selection and sequencing of ridge preservation, bone grafting, soft tissue grafting and prosthetic soft tissue enhancement procedures procedures with implant placement will be emphasized. The following evidence based surgical and prosthetic treatment protocols and techniques will be covered in detail: ideal 3D esthetic implant placement, ridge preservation procedures with immediate and delayed implant placement, simultaneous and staged hard and soft tissue esthetic implant site development procedures and use of interim provisional restorations versus implant supported esthetic provisional restorations. “How, When and Where” methodology will be used to simplify the interdisciplinary management of single, multiple adjacent and complex full arch esthetic dental implant reconstructions. Scientific evidence based information and extensive case based learning will be used to demystify implant esthetics.

**DAY 5**

**Avoiding and Managing Complications in Implant Therapy**
This indispensable program will teach participants to identify and avoid potential complications before they occur and how to successfully treat a broad range of complications related to dental implant surgery, hard and soft tissue grafting procedures and implant prosthetics. Fundamental anatomic, biologic and biomechanical concepts related to the occurrence of implant complications will be presented. Preoperative risk assessment and treatment planning principles to avoid general and esthetic complications will be emphasized. Clinical case presentations will demonstrate step-by-step management of general and esthetic implant complications. A great way to wrap up your learning experience, this program builds on information presented in earlier programs.
Expand your implant surgery practice and increase the number and predictability of elective surgeries you perform by incorporating: the fundamental sciences, patient evaluation and treatment planning protocols, case selection information, implant surgery techniques, extraction site management and ridge preservation procedures, soft tissue grafting, periodontal plastic surgery and bone grafting techniques for implant site development, universal esthetic principles, esthetic risk assessment information and evidenced based treatment protocols for selection and sequencing esthetic implant site development procedures as well as avoiding and treating surgical and prosthetic implant complications that you will learn from the Pyramid of Knowledge for Implant Surgeons™ presented at this course.

Upon completion of this course, participants should be able to:

**Day 1 Essentials**

- Understand fundamental science related to dental implant therapy
- List the components of a successful implant consultation
- Perform a focused patient evaluation and select indicated diagnostic measures
- Understand the benefits of using Cone Beam CT, digital treatment planning and guided implant surgery
- Perform a general risk assessment and determine if a patient is a candidate for dental implant surgery
- Recognize the parameters that influence the level of treatment difficulty and differentiate between straightforward, advanced and complex implant cases
- Formulate treatment planning options for standard edentulous and partially edentulous case types including single tooth, multiple tooth and full arch implant restorations
- Understand implant occlusion and biomechanics
- Select the appropriate loading protocol for your patients and describe the indications for conventional loading, early loading, immediate restoration, immediate loading and delayed loading
- List the components of an ideal implant surgery armamentarium and employ aseptic technique
- Understand the criteria for optimal flap designs and recognize when soft tissue grafting is indicated
- Use flap designs and surgical maneuvers to predictably manage soft tissues during dental implant surgery
- List the principles and benefits of conventional and digitally guided restoration driven implant placement and site specific osteotomy preparation
- Select and employ dental implant surgery suturing techniques and methods to obtain hemostasis
- Describe the indications and contraindications for flapless and minimally invasive dental implant surgery.
- Incorporate minimally traumatic extraction site management and ridge preservation procedures
- Understand general patient management considerations and how to avoid common complications

“I came to this course principally to take the hands on course; I expected the lecture portion to be a boring rehash of historical literature. What I experienced were first rate lectures which were stimulating and informative. And the hands-on courses lived up to my lofty expectations. I will immediately implement these procedures into my practice. I will definitely take this course again and recommend it to my peers.”

Eric Oakley (Yuba City, CA)
Describe the anatomic and biologic basis for performing soft tissue grafting and periodontal plastic surgery around teeth and implants

Be familiar with material science used in soft tissue periodontal plastic surgery including: PRP, Gem 21, Mucograft™, Emdogain and root conditioning agents

Perform a focused patient evaluation and develop a individualized “soft tissue” treatment plan for your patients

Be familiar with specialized soft tissue instrumentation, suture materials and periodontal suturing techniques

Describe the indications, procedure steps and suture techniques for the following flaps used in periodontal plastic surgery: coronal advancement, double papilla, lateral sliding, semi-lunar and pouch and tunnel approaches

Describe the principles, indications, limitations, and procedural steps for performing the following procedures around teeth and implants:

- Gingival, Connective Tissue and Combination Onlay-Interpositional Grafts
- Palatal Roll and VIP-CT Palatal Pedicle Flaps
- Dermal matrix Grafts and Mucograft™
- Root-Abutment Coverage and Esthetic Crown Lengthening

Describe the advantages of using the VIP-CT Pedicle flap for rejuvenation of compromised sites, papilla enhancement, and vertical 3D soft tissue augmentation

Describe surgical techniques for papilla augmentation

Understand patient management considerations and how to avoid complications when performing soft tissue grafting and periodontal plastic surgery

DAY 2
Soft Tissue

Understand the biology and surgical principles of intra-oral bone grafting

Describe the scientific basis and surgical principles of guided bone regeneration (GBR)

Understand fundamental material science related to: Bone graft materials: Xenografts, Allografts, synthetic Bone Ceramics (Bone Ceramic, Ingenious), HEALOS® biomimetic graft substitute, GBR Barrier Membranes, rhPDGF-BB (Gem 21S®), rhBMP-2(INFUSE® Bone Graft), Emdogain, PRP and Stem Cell Concentrates (BMAC) used for periodontal and peri-implant bone grafting

Perform a focused evaluation for patients in need of bone grafting and identify risk factors to reduce complications

Describe the advantages of using cone beam CT as a diagnostic tool for intra-oral bone grafting procedures

Formulate predictable bone grafting treatment plans for your patients

Understand the soft tissue requirements for successful bone grafting

Minimize complications by properly sequencing bone and soft tissue grafting procedures

DAY 3
Hard Tissue

Describe the principles, indications, limitations, and procedural steps for performing the following hard tissue site development procedures allowing implant placement at sites with deficient alveolar ridge anatomy:

- Safe intra-oral harvest of autogenous block and particulate grafts from the mandible, maxillary tuberosity and zygomatic buttress
- Implant placement with simultaneous GBR procedures
- Staged alveolar ridge reconstruction with bone grafting procedures prior to implant placement including:
  - Use of autogenous block and particulate grafts, allograft block bone (J-Block), bone graft expanders, barrier membranes, ridge expansion-ridge splitting and 3D biologic bone graft techniques
- Lateral window and crestal osteotome techniques for sinus elevation and grafting with immediate or delayed implant placement

Understand patient management considerations and how to avoid complications when performing hard tissue site implant development for your patients
DAY 4
Esthetics

• Understand universal esthetic principles and perform a systematic esthetic patient evaluation
• Identify factors associated with esthetic complications and failures and perform an individualized esthetic risk assessment on your patients
• Understand the scientific basis, material science and tissue engineering concepts related to ridge/socket preservation procedures
• Describe the rationale, principles and procedure steps for performing minimally traumatic tooth extraction and the Bio-Col™ ridge preservation procedure in esthetic areas
• Understand the evidence based indications and contraindications for immediate implant placement and provisionalization in esthetic areas
• Describe the classification and surgical management of labial wall extraction site defects in esthetic areas including immediate dentoalveolar reconstruction protocol (IDR).
• Describe the requirements for achieving natural appearing single and multiple adjacent esthetic implant restorations with the Bio-Col™ technique

DAY 5
Complications

• Avoid, identify and treat a broad range of complications related to diagnosis and treatment planning, dental implant surgery, adjunctive hard and soft tissue grafting and implant prosthetics.
• Perform a pre-treatment patient evaluation and identify general and esthetic risk factors in order to avoid dental implant complications.
• Recognize and avoid potential complications and clearly understand the contraindications for dental implant therapy in patients with systemic disease
• Avoid complications with proper treatment planning and the use of digital technologies including CT based planning and computer aided execution of implant placement procedures.
• Avoid, identify and manage intra-operative surgical complications including: hemorrhage, nerve damage, malposed implants, lack of primary implant stability, damage to adjacent teeth, penetration of the sinus or nasal cavity, tissue emphysema, infection, wound dehiscence, aspiration or ingestion of instrumentation, mandibular fracture and postoperative pain.
• Avoid, identify and treat complications related to tooth extraction, ridge preservation grafting, immediate placement, immediate function procedures and esthetic implant procedures.
• Avoid, identify and treat peri-implant mucositis, peri-implantitis and retrograde peri-implantitis of endodontic etiology.
• Identify and remove failed or failing implants and understand the factors that influence whether implant replacement will be successful.
• Avoid, identify and treat complications related to the following bone grafting procedures: particulate bone grafts with guided bone regenerations, sinus lift bone grafts and block bone grafts.
• Avoid, identify and treat complications related to soft tissue grafting procedures including: donor site hemorrhage, recipient site sloughing, inadequate augmentation volume, delayed healing, and post operative pain following gingival grafts, connective tissue grafts and palatal pedicle flaps
• Avoid, identify and treat prosthetic complications related to: prosthetic planning, interim provisional restorations, improper occlusion, malposed implants, restoration misfit, improper abutment selection, cement problems, screw loosening or fracture, fracturing of restorations including veneering porcelain. Identify when and where not to use pink porcelain or other pink restorative materials for implant-supported fixed and removable partial dentures.
• Avoid litigation by following proper patient interview, education, consultation, case presentation, informed consent and inter-office and intra-office communications protocols.
Participants will perform the most commonly used evidence based soft tissue grafting-periodontal plastic surgery or hard tissue grafting implant site development techniques on anatomic models. Video surgery footage, detailed workshop manuals and Dr. Sclar’s personal instruction will guide participants as they perform numerous simulated surgical procedures. Ample time will be available for mastering of individual surgical skills and for discussion with Dr. Sclar. Participants will gain valuable insight into surgical set-up and gain hands-on experience with the techniques and procedures indicated below:

**Workshop #1**

**Soft Tissue Grafting for Teeth and Implants**

*Dr. Anthony Sclar*

- Soft tissue incision techniques, periodontal flap and pouch procedures for implant site development and root-abutment coverage
- Subepithelial connective tissue grafting
- Gingival Grafting
- Use of Dermal matrix grafts and Mucograft™
- Vascularized Interpositional Periosteal-Connective Tissue Flap (VIP-CT Flap)
- Suturing techniques used in soft tissue-oral plastic surgery for securing grafts and flaps

**Workshop #2**

**Intra-Oral Bone Grafting and Implant Site Development**

*Dr. Anthony Sclar*

- Soft tissue incision techniques, flap designs and recipient site preparation of deficient alveolar ridges for particulate bone grafting with guided bone regeneration around implant(s) with exposed threads
- Soft tissue incision techniques, flap designs and recipient site preparation of deficient alveolar ridges for block bone grafting with guided bone regeneration prior to implant placement
- Intra-oral harvest of autogenous particulate and corticocancellous block grafts
- Stabilization of particulate grafts, and block bone grafts and barrier membranes at recipient sites
- Techniques to achieve passive soft tissue closure over particulate and block bone grafts
- Use of bone grafting instrumentation (Micro-saw, piezosurgery, osteoharvester), xenografts, block and particulate allografts, synthetic bone ceramic, barrier membranes, and healing aids such as PRP, recombinant PDGF, and enamel matrix protein derivatives
Prosthetic Concepts and Techniques for Achieving Success in Implant Dentistry

Dr. Larry B. Grillo

Join Dr. Grillo to learn about:

- Designing Implant Restorations: removable versus fixed, occlusal and biomechanical considerations
- Abutment designs: screw retained or cemented, stock or custom, computer aided design and fabrication
- Design and fabrication of surgical templates
- Provisional restorations: Interim, implant supported, esthetic soft tissue shaping and immediate provisional restorations
- Prosthetic considerations for immediate loading

A brief “hands on workshop” for surgical indexing and techniques for fabrication of immediate provisionals will follow lecture.

Presentation Skills and Management Protocols for Implant Dentistry

Ms. Elizabeth Suarez

Join Ms. Suarez to learn about:

- What makes a great implant team?
- The successful implant consultation
- Case presentation skills and techniques to enhance patient acceptance
- Financial presentation methods that build value
- Intra-office and referral base communication and marketing
- Fee structure and adjunctive procedure codes
- Role and duties of an Implant Coordinator
- Designing Implant Restorations: removable versus fixed, occlusal and biomechanical considerations
- Abutment designs: screw retained or cemented, stock or custom, computer aided design and fabrication
- Design and fabrication of surgical templates
- Provisional restorations: Interim, implant supported, esthetic soft tissue shaping and immediate provisional restorations
- Prosthetic considerations for immediate loading

“5 days all you can eat buffet of implant information.”
Dr. Leland Chrisman, OMS (Tupelo, MS)

“I appreciate Dr. Sclar’s manner of presentation; no pretension, no bull, very down to earth.”
Dr. Dan Johnson, OMS (Longmont, CO)

“An essential course from a true master of implantology, this will change the way I practice.”
Dr. Guy McLellan, GP (Beaconsfield, UK)

“Everything presented was practical and taught at a level to allow me to go home and perform these procedures. The material presented was non-biased with a scientific base and research to back results. Dr. Sclar didn’t try to showboat cases that were beyond our abilities. The manual was well organized for easy at-office reference.”
Dr. Darrell Bourg, GP (Marrero, LA)
“I have attended other conferences and have had discussions with other surgeons regarding their different “cocktails” of materials and methods. Dr. Sclar is the first person to give me a sound scientific rationale for a technique. I am much more comfortable using a system that I can believe in because it make sense scientifically and not just following someone’s recipe.”

Dr. Rob Armstrong, Oral Surgeon (Chagrin Falls, OH)

“He is an outstanding educator. As a Board Certified Periodontist, I can verify he is an outstanding surgeon. His attention to detail is amazing. I highly recommend spending time and money to learn from him. Make the time to attend his Annual Comprehensive Surgical Course in Miami Beach, Florida. If you seek exceptional and cutting-edge Dental Implant surgical knowledge, he presents real and predictable information.”

Paul J. Denemark, DDS, MSD (Burr Ridge, Illinois)

“Both the soft tissue grafting lecture and bone augmentation were extremely informative, best I have taken. I respect Tony’s honesty as far as his complications – usually we see the beautiful cases with excellent soft tissue and bone responses. However, this is not reality. It was great to learn from other mistakes, not just our own. I would recommend this course!”

Dr. David Sorial (Southgate, MI)

“Hand-outs are extremely useful and well thought out. Refreshing presentation where Dr. Sclar’s vast clinical experience and his enthusiasm for the subject as well as his clinical judgment and his clinical mastery are indicated and enable the course to deliver useful practical and invaluable guidelines for both novice and expert operators.”

Dr. Ro Kurban
Immediate Dentoalveolar Restoration – IDR
Immediate-loaded implants in compromised alveolar sockets

Dr. José Carlos Martins da Rosa
Dr. Ariadene Cristina Pertile de Oliveira Rosa
Dr. Marcos Alexandre Fadanelli

Single-tooth replacement in the esthetic zone has been one of the most common indications for dental implant placement. Compromised teeth are removed using atraumatic principles and immediately replaced by an implant-supported provisional restoration, with excellent esthetic, biological, and functional results.

However, in cases of compromised sites with bone loss/gingival recessions, the clinical scenario presents a different dilemma. Until now, all developed surgical recommendations required long-term treatment with possible undesirable complications in the tissue architecture.

The Immediate Dentoalveolar Restoration (IDR) is a technique established to broaden indications for immediate loading on individual teeth. In this way, tissue losses with varied extensions are reconstructed in the same surgical session of implant placement and provisional crown installation, reducing the number of interventions and keeping predictability on esthetic aspects.

The IDR protocol was developed six years ago from the need to minimize the treatment time and morbidity of reconstructive procedures used in these cases. It was also the theme of the book of the same name launched in Portuguese language in 2010 and in Spanish language in 2012, by Santos Publishing (São Paulo – Brazil), and it is soon to be launched in English in the fall of 2012, by Quintessence Publishing.

This course will discuss the scientific basis, the step by step technique and indications. The IDR, which advocates minimally invasive flapless procedures, is presented as a viable and reproducible alternative.
Main Conference Speaker and Director

**Dr. Anthony G. Sclar** is considered a leader around the world in reconstructive and esthetic dental implant surgery. He completed his oral and maxillofacial surgery training at the University of Miami, Jackson Memorial Hospital in 1989. A diplomat of the American Board of Oral and Maxillofacial Surgeons, Dr. Sclar maintains a very active dental implant surgery practice at *Sclar Oral Surgery and Implant Dentistry* performing 15-20 implant site development, periodontal plastic surgery, tissue engineering and immediate function procedures each week.

Dr. Sclar is an adjunct professor and Director of Clinical Research and Dental Implant Surgery in the department of Oral and Maxillofacial Surgery at Nova Southeastern University College of Dental Medicine, a reviewer for numerous scientific implant journals and the founder of *Integrated Seminars, Sclar Center for Empowered Dental Implant Learning and implantstrategies.com*.

In addition to publishing numerous journal articles and textbook chapters pertaining to dental implant surgery and adjunctive procedures, Dr. Sclar co-edited a surgical atlas entitled: *Soft Tissue Esthetic Procedures for Teeth and Implants* (W.B. Saunders 1999) and authored the hallmark, multilanguage textbook entitled; *Soft Tissue and Esthetic Considerations in Implant Therapy* (Quintessence 2003) and is currently authoring a second textbook.

An innovator, Dr. Sclar developed classifications and treatment algorithms for predictable management of extraction site defects and alveolar ridge defects in esthetic areas. He also developed; the Bio-Col™ ridge preservation protocol, the Vascularized Interpositional Periosteal-Connective Tissue Flap for esthetic soft tissue augmentation and rejuvenation of compromised anterior sites, and the “u” shaped peninsula flap, a minimally invasive approach for implant surgery.

Dr. Sclar is one of the foremost implant educators in the world and a passionate clinician who not only establishes a biologic basis for the techniques he presents but integrates evidence based information with his broad based clinical experience for the benefit of his colleagues and course participants.

"Dr. Sclar's course provides an excellent review of fundamental esthetic and implant surgical procedures. I also learned interesting surgical maneuvers and techniques which I'll certainly use in my practice!"

Dr. Vinay Bhide  (Toronto, Ontario)

"Excellent course for novice and experienced surgeons who are looking to reinforce their understanding of the essentials of basic implant surgery."

Dr. John Lovoi, Jr.

"I will never look at bone and soft tissue the same again"

Dr. Arif Saoan
Larry Grillo D.D.S, a graduate of The University of Texas at San Antonio Dental School, maintains a private practice focused on implant and esthetic dentistry in South Florida. During the past 20 years, he has worked closely with Dr. Sclar in the treatment of a large number of patients undergoing implant therapy and complex esthetic dental rehabilitation. Dr. Grillo has written articles and lectures nationally on implants and esthetics. He serves as associate faculty at Barry University Sports Medicine program and as a product advisor to several dental companies. Dr. Grillo brings a practical, real world approach to restorative implant dentistry.

Marcos Alexandre Fadanelli, DMD, a graduate of the Catholic University of Rio Grande do Sul, Porto Alegre, Brazil 1997 in Dentistry. Dr. Fadanelli is currently working on his Masters of Science in Restorative Dentistry from the Center of Dental Research Sao Leopoldo Mandic-Campinas, Brazil. Dr. Fadanelli is currently in Private Practice in Caxias do Sul, Brazil.

Ariádene Cristina Pértile de Oliveira Rosa, DMD, a graduate of the Catholic University of Rio Grande do Sul, Porto Alegre, Brazil 2002 in Dentistry. Dr. Oliveira Rosa later specialized in Implantology in the Center of Dental Research Sao Leopoldo Mandic, Campinas, Brazil in 2005. Following her love of holistic health and Research, Dr. Oliveira Rosa received a specialist in Acupuncture from the Brazilian College of Systemic Studies in 2010. Dr. Oliveira Rosa is currently working on her Master of Science in Implantology at the Center for Dental Research, Sao Leopoldo Mandic-Campinas, Brazil; while maintaining a private practice in Caxias do Sul. Dr. Oliveira Rosa is the c/o author of the highly acclaimed text book, *Immediate Dentoalveolar Restoration, Immediate-loaded implants in compromised alveolar sockets*, 2012, by Santos Publishing (São Paulo – Brazil).

José Carlos Martins da Rosa, DMD, a graduate of the Federal University of Santa Maria Dental School in Brazil in 1998; later in 1991, Dr. Rosa specialized in Periodontics at the Sao Paulo Association of Dentists in Brazil, continuing his education in 2005, Dr. Rosa graduated with a Master of Science in Prosthetics from the Center of Dental Research In Sao Leopoldo Mandic-Campinas, Brazil. Dr. Rosa is currently working on a his Doctorate in Implantology at the of Dental Research In Sao Leopoldo Mandic-Campinas, Brazil while maintaining a private practice in Caxias do Sul, Brazil. Dr. Rosa is also the principle author of the highly acclaimed text book, *Immediate Dentoalveolar Restoration, Immediate-loaded implants in compromised alveolar sockets*, 2012, by Santos Publishing (São Paulo – Brazil).

Ms. Elizabeth Suarez has worked in state of the art oral and maxillofacial surgery offices for over 30 years. After receiving her CDA from St. Louis Community College in 1974, she worked as a surgical assistant for many years, gaining broad experience in oral and maxillofacial surgery. For over 20 years, Ms. Suarez has been Dr. Sclar’s implant treatment coordinator. She uses her expertise to educate patients about the benefits of dental implants during consultations and coordinates their care throughout treatment. Ms. Suarez presents the management systems and case presentation skills required for the successful implant practice.
Credit Hours

A certificate of completion will be awarded to participants completing the General Session and continuing education credits break down as follows:

Dr. Sclar authored the hallmark multi-language textbook entitled: *Soft Tissue and Esthetic Considerations in Implant Therapy* (Quintessence 2003). Written for the novice and expert alike, this lavishly illustrated book presents advanced techniques for preserving and restoring natural dental esthetics through implant therapy. While the book covers many of the concepts and techniques that will be discussed during the ISTM 2013 course, attendees can expect to learn much more from direct interaction and hands-on participation with Dr. Sclar.

For more information, visit Quintessence Publishing Co. Inc., at www.quintpub.com or contact them at 800-621-0387.

(Repeat Participant)

“My concern was returning to the course after two years and simply seeing the same lecture. To my surprise and pleasure, Dr. Sclar had completely revamped the entire program; all new cases, updates and changes to surgical techniques and a much more dynamic presentation. I look forward to coming back again!”

John M. Emmet (Phoenix, AZ)

“Understanding esthetics and soft tissue management will become the most valuable tool in my implant practice and there is no better place to learn it than here”

Abraham Finkelman (Raanana, Israel)

February 3rd afternoon only

Included with 5 Day Registration

*Please indicate the days you wish to attend:

- Friday, February 1st
- Saturday, February 2nd
- Sunday, February 3rd
- Monday, February 4th
- Tuesday, February 5th

Optional Workshops:

- $875 – WS # 1: Soft Tissue Grafting for Teeth and Implants – Dr. Anthony Sclar
  Saturday, February 4th or Monday, February 6th (3:30 - 6:30 PM)
- $875 – WS # 2: Intra-Oral Bone Grafting & Implant Site Development – Dr. Anthony Sclar
  Sunday, February 5th (3:30 - 6:30 PM)
- $500 – WS # 3: Prosthetic Concepts and Techniques for Implant Dentistry – Dr. Larry Grillo
  Monday, February 6th (3:30 - 6:30 PM)
- $500 – WS # 4: Case Presentation Skills and Management Protocols for Implant Dentistry – Ms. Elizabeth Suarez
  Monday, February 6th (3:30 - 6:30 PM)

Registration Information (Please print or type)

First Name _______________________________________________  Last Name _____________________________________________________

If you have a disability or require special assistance, please notify Integrated Seminars no later than December 31, 2012.

Cancellation Policy
All cancellations must be made in writing prior to December 15, 2012 minus a $100 administrative fee. No cancellations or refunds will be accepted after this date.
Accommodations

The Miami Beach Resort and Spa and the Grand Beach Hotel are located on prime oceanfront property overlooking world-renowned Miami Beach and the spectacular Intercostal waterway. The resorts are located just five minutes away from the art deco landmarks and non-stop excitement of South Beach. Each resort has its own stretch of white sandy beach and heated outdoor pools. There is jet skiing, snorkeling, and other aquatic sports steps from your room. Both resorts offer breath taking views and a thoughtful array of amenities such as high-speed internet access and wet bars.

The Miami Beach Resort and Spa has a special daily rate of $174.00 single or double on the European Plan; plus taxes. “Integrated Seminars” must be mentioned to reserve at the conference rate before the cut off January 11, 2013. One night’s deposit is required when making a reservation. This is the hotel the meeting will be held in. Reservations can be made by contacting:

The Miami Beach Resort and Spa
4833 Collins Avenue, Miami Beach, FL 33140

Conference Testimonials

“Tony is fantastic. Great course. Worth every penny. Very good handout and room for notes. Well run course. I especially appreciate honesty, as regards to showing less than optimal cases, so that we can avoid making the same mistakes.”

Thomas Butts, Oral and Maxillofacial Surgeon
(Brighton, MI)

“Best course I have ever attended! Period.”

Stephen F. Molpus (North Little Rock, AR)

It has been several months since I attended your course in Miami. I can only say that it was one of the best several days I have spent on continuing education. Having a few of my staff present has been a definite advantage. While I was aware of and performed the principles in the course, your lectures and hands on workshops has been extremely beneficial and has indeed taken my implant practice to a new level. Thank you.

Dr. Marvin Slott, OMS (Gainesville, FL)

“This is my first, in many lectures, I have attended that a surgeon has admitted his misfortunes. I respect Dr.Sclar with his candidness. Excellent, well integrated course, it comes full circle. Would highly recommend it.”

Yoric, J.S. Change (Leominster, MA)
